

# Our Analysis Process

We are dedicated to using trusted intelligence-based services to provide a competitive edge to our partners and strengthen national security. Our analysis services encompass a wide range of areas, including All-Source Intelligence, Planning, Programming, Budgeting, Execution (PPBE), Readiness Analysis, Foreign Investment (CFIUS), Adversary Capital, and Cyber Security Management. To effectively deliver these services to support multiple offices in the United States Government, Department of Defense, Department of Homeland Security, intelligence community, and commercial enterprises worldwide, we employ a systematic and efficient analysis process.

## 1. Requirement Identification

The analysis process starts with identifying the specific requirements of our partners and stakeholders. This involves understanding the objectives, priorities, and challenges faced by the client, as well as the relevant regulatory or security considerations.

## **2. Data Collection and Integration**

Once the requirements are defined, our team gathers data from a variety of sources, including open-source intelligence, classified information, and proprietary databases. This data is then integrated to provide a comprehensive and holistic view of the situation.

## **3. Analysis Framework Development**

We develop a tailored analysis framework based on the specific requirements of the project. This framework outlines the methodologies, tools, and techniques that will be utilized to conduct the analysis and derive actionable insights.

## **4. Data Analysis and Interpretation**

Our team of experienced analysts conducts a rigorous analysis of the integrated data using advanced analytical tools and techniques. This process involves identifying patterns, trends, anomalies, and relationships to extract meaningful conclusions.

## **5. Collaborative Review and Validation**

The analysis is reviewed collaboratively by a team of subject matter experts to validate the findings and ensure accuracy and relevance. This step enables us to refine the analysis and incorporate additional insights from diverse perspectives.

## **6. Report Generation and Presentation**

Based on the validated analysis, a comprehensive report is generated, outlining the key findings, recommendations, and actionable insights. This report is presented to the client in a clear and concise manner, tailored to their specific needs and preferences.

## **7. Feedback and Iteration**

We encourage feedback from the client to refine and iterate on the analysis process continually. This iterative approach ensures that our analysis remains relevant, accurate, and actionable in addressing the evolving needs of our partners.

By following this systematic analysis process, Sourcing ensures the delivery of high-quality intelligence-based services that provide a competitive edge to our partners and contribute to strengthening National Security.
